

Your Dream Destination is Calling: How Will You Get There?

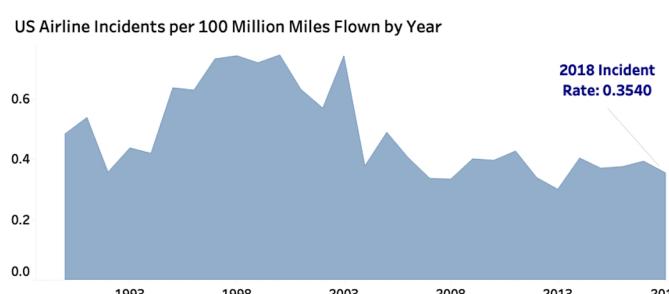

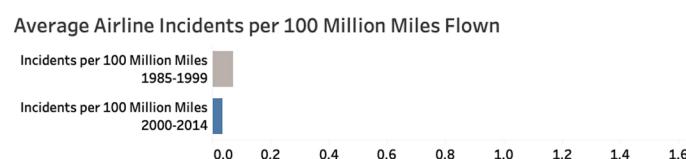

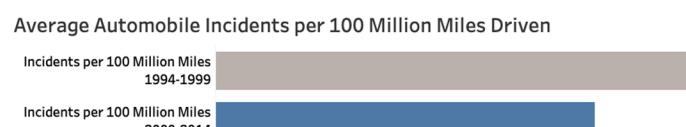

By Kenneth Waite | Last updated October 21, 2020

TIME IS MONEY, AM I RIGHT? One of the biggest, most impactful decisions you can make on your travel plans is the mode in which you get there in order to make the most of your precious time off with loved ones. Our time is limited and life is busy; this is true now more than ever in this ever expanding world where friends and family can live across the nation or even across the globe. Making the most of the important moments is of utmost importance and ensuring you're making the right travel arrangements eases stress and improves your experiences.

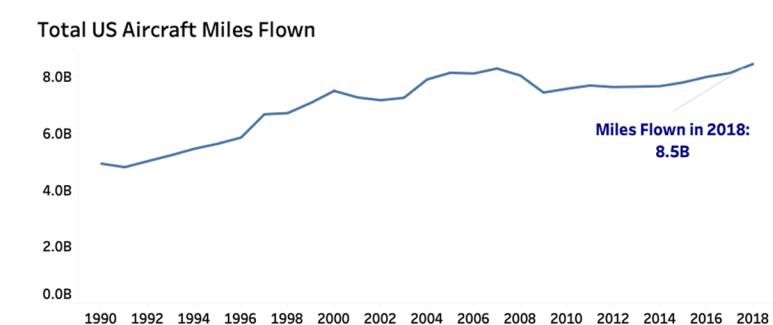

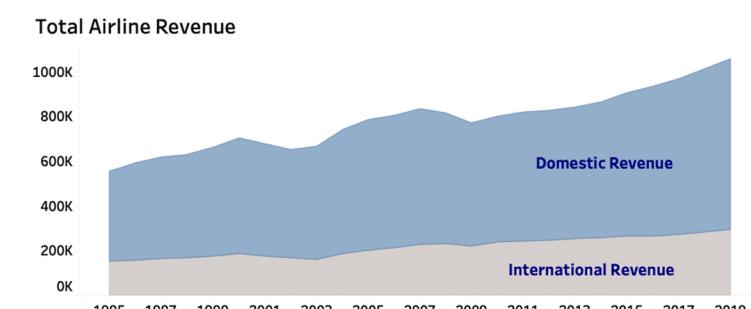

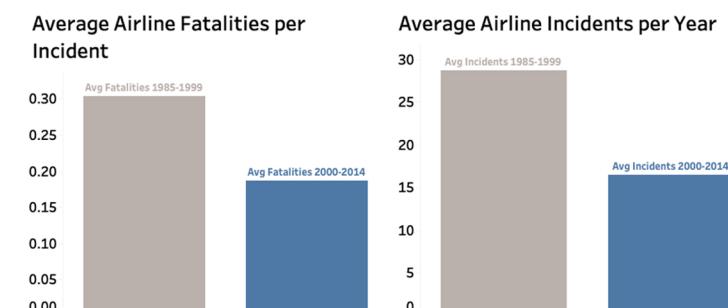

Airline travel has never been safer and the time saving aspects coupled with safety benefits make it a no brainer for travelers.

So you're faced with the question, how should you travel to your dream destination? Is it safer to fly or drive? Not only does air travel reduce the amount of time a person must take to travel, but it also reduces the chance of a person being involved in an accident. From 2000 to 2014, a person was 43 times more likely to be involved in an automobile accident than an airplane incident.

From 2000 to 2014, there were 1.31 incidents per 100 million miles driven in the United States. During that same time frame, there were 0.03 airline incidents per 100 million miles flown.

Thanks to stringent safety protocols, airline revenue has been increasing due to the downward trend in the number of airline incidents and fatalities over the past 15 years compared to the previous 15 years. We take great pride in the safety we have accomplished for our patrons and look forward to continuing the rise in these safety figures.

Data proves that from 1985 - 1999, the average fatalities per airline incident were about 0.30 people. Consequently, from 2000-2014, that number has dropped significantly to 0.19.

While you calculate your final decision and plan for the fun trip ahead, join the 778 million other Americans flying 8.5 billion miles. Ditch the wasted time, sit back, and relax knowing you're making the safest call for your family. Your dream destination is calling; let's get flying!
